

## Specifications

| Standard Auxiliary | 24-60VDC (Fuse 0,5A) |
| :---: | :---: |
| Voltage: | 110-220VDC (Fuse 1A) |
| Optional Auxiliary Voltage: | $\begin{aligned} & 100-120 \mathrm{~V}, 200-240 \mathrm{~V}, \\ & 380-415 \mathrm{~V}, 440-460 \mathrm{~V} \text {, } \\ & 480 \mathrm{VAC}, 40-70 \mathrm{~Hz} \\ & \text { (Fuse } 0,5 \mathrm{~A} \text { ) } \end{aligned}$ |
| Supply tolerance: | +10\%, -20\% |
| Power rating: | 5 VA |
| Current Input: | 1A CT or 5A CT, <0,1VA |
| Contact rating: | AC: 100VA -250V/2A max. DC: 50W -100V/1A max. |
| Adjustments: | See table on the right |
| Ampere range: | Any \% of the CT value |
| Analogue output 1: (see page 2 for available outputs) | mA : Up to $20 \mathrm{~mA}, \max 500 \mathrm{R}$ V: Up to $10 \mathrm{~V}, \min 100 \mathrm{kohm}$ (other on request) |
| Analogue output 2: (see page 2 for available outputs) | mA : Up to $20 \mathrm{~mA}, \max 500 \mathrm{R}$ V: Up to 10 V , min 500 ohm (other on request) |
| Accuracy: | Class 0,5 |
| Temperature: | -20 to $+70^{\circ} \mathrm{C}$ |
| Humidity, relative: | 0-95\% |
| Weight: | 0.6 kgs |
| Front protection: | IP21 |
| Flammability: | UL94-V0 |

The unit meets EN 60255-27 Cat. III, Pollution degree 2 and the relevant environmental and EMC tests specified in EN 60255-26 to comply with the requirements of the major Classification Societies.

Related information:
The KCC112x series are also available for panel mounting as KPC112xseries.

## Norway

Denmark

## Description

The digitally controlled KCC112x protects against phase-, earth- and winding faults within the protected area (the stator) of large AC generators. It detects even minute insulation punctures, flash-over carbon deposits and contamination. The unit measures highest up differential current from antiparallelled CTs in a Merz-Price configuration, by comparing current levels at the end of each phase winding.

Alarm trip must be set sufficiently high to ensure that generator magnetisation current does not cause tripping. The alarm delay is to be set so that the initial inrush current have returned to normal level before the delay period elapses. The warning trip level and delay can be set as required to give early warning.

User settable trip levels and delays. Colour of LEDs indicate alarm status. Alarm LEDs flash during count-down.

Up to two individual very fast analogue output signals (optional) proportional to highest up current (see page 2 for available outputs). The analogue output is isolated from the CT and auxiliary power.

## Relay Configurations

R1 is used for early warning. R2 or R3 (fail safe) is to be used for generator breaker trip, the other alarm relay can be used for local indication input to PMS, alarm system etc.

| Relay | Warning | Alarm | Fail Safe | Latch | LED status |  |  |
| :---: | :---: | :---: | :---: | :---: | :---: | :---: | :---: |
| R1 | X |  |  |  | Power | Warning | Alarm |
| R2 |  | X |  | *X | - | $\bigcirc$ | $\bigcirc$ |
| R3 |  | X | X | *X | Normal | Alarm | Alarm |

Relays shown de-energised.
R3 are fail-safe and energises when unit is powered.
*X) See the table below for models with latch function

| Models | Latch | O/P 1 | O/P 2 | Hysteresis | Pathfinder |
| :--- | :---: | :---: | :---: | :---: | :---: |
| KCC112E | X | - | - | - | X |
| KCC112FA | X | X | - | - | X |
| KCC112FB | X | X | X | - | X |
| KCC112G | - | - | - | - | - |
| KCC112GFA | - | X | - | - | - |
| KCC112GFB | - | X | X | - | - |

| Adjustments | Trip level | Delay |
| :---: | :---: | :---: |
| Warning: | 0-100\% of set | 0-30secs |
|  | alarm trip level |  |
| Alarm: | 0-40\% of I nom. | 0-3secs |

The Pathfinder (only on latching models) indicates the phase causing the trip by flashing pattern of the relevant LED.

## Connection Diagram

## Analogue Output

The output signals are proportional to the meter reading (see page 1 for an overview of models and functions).

The signal is specifically intended as an input to a control system for monitoring or control.

Add suffix from table below to type designation to specify output required:

Outputs 1
Outputs 2

| O/P1 | $\mathbf{0 - 1 0 m A}$ | O/P11 | $\mathbf{0 - 1 0 m A}$ |
